

# ONE.4WB

New universal receiver

# ONE.4WB

New 4-channel 433.92 MHz receiver.

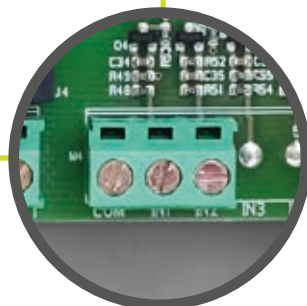

The new ONE.4 receiver with wide-range 90÷255 Vac 50/60 Hz supply, manages the Benincà triple radio code (**Advanced Rolling Code, Rolling Code and Fixed Code**) enabling simplified management in all contexts and situations with a product suitable for all needs.

The integrated display facilitates device programming. A password can be set to further guarantee maximum security where there is a risk of tampering by unauthorised persons; this gives the receiver a functional level on a par with the most sophisticated Benincà control units.

ONE.4 is also compatible with the new Advantouch programmer. Using Advantouch means easy and rapid control of radio commands in complex plants or plants featuring many users, but especially enables updating the receiver firmware simply and rapidly.

ONE.4 is equipped with two inputs for cabled commands: each input can be assigned one of the 4 outputs via a configuration of the dedicated parameters.

The new ARC code, the Advanced Rolling Code, is one of the important novelties of 2016 and guarantees absolute safety.

ADVANCED-ROLLING-CODE  
**arc**  
128bit  
SECURITY

## WHAT IS ARC?

The ADVANCED ROLLING CODE, thanks to the length of its transmitted code (128bit vs the current 64bit version) guarantees the maximum safety. The new encoding makes the TO.GO transmitter unique and it becomes a key element of continuous link between the user and the brand. The safety and exclusivity of the encoding will make TO.GO a unique and irreplaceable transmitter for the opening of Benincà systems. We as Manufacturer and you as distributors can be proud of this great opportunity to connect the users to the brand.
